

JAVA PRACTICAL RECORD

Marks of Five Subjects

Experiment No.	02
Date	17/09/2026
Program	MarksOfFiveSubjects
Concept	Command-Line Arguments

This program accepts marks of five subjects through command-line arguments and calculates their total and average.

1. Objective / Aim

To write a Java program that reads marks of five subjects using command-line arguments and calculates the total and average marks.

2. System Requirements

Hardware: Standard computer/laptop. Software: JDK 8 or later, command prompt/terminal, and a Java-compatible editor or IDE.

3. Algorithm / Logic Description

1. Start the program.
2. Read five subject marks from args[0] through args[4].
3. Convert each argument from String to int using Integer.parseInt().
4. Add the five marks to calculate the total.
5. Divide the total by 5.0 to calculate the average.
6. Display the total and average.
7. Stop the program.

4. UML Class Diagram

MarksOfFiveSubjects
main(String[] args)
Read 5 command-line arguments
Calculate total and average
Display results

5. Source Code

```
class MarksOfFiveSubjects {  
    public static void main(String[] args) {  
  
        int a = Integer.parseInt(args[0]);  
        int b = Integer.parseInt(args[1]);  
        int c = Integer.parseInt(args[2]);  
        int d = Integer.parseInt(args[3]);  
        int e = Integer.parseInt(args[4]);  
  
        int total = a + b + c + d + e;  
        double average = total / 5.0;  
  
        System.out.println("Total = " + total);  
        System.out.println("Average = " + average);  
    }  
}
```

6. Compilation & Execution Commands

```
javac MarksOfFiveSubjects.java  
java MarksOfFiveSubjects 85 95 90 88 96
```

7. Output Screen

```
Total = 454  
Average = 90.8
```

8. Result

The program successfully reads five subject marks using command-line arguments and calculates the total and average.
